

INSTALLATION INSTRUCTIONS

Please read and understand these instructions before attempting to apply your vinyl. Take your time to get the positioning right and level. If in doubt, please call us.

We advise beginners to wet mount.

Wet Mount Instructions

You will need the following equipment:

- Cloths or paper towel to dry the surface
- Squirt bottle (filled with water and a few drops of dishwashing detergent)
- Squeegee (to remove air bubbles)
- A scraper (to clean window)

1. Wash Window and remove all wax, grease and dirt from the area the vinyl will be applied
2. It is important that you measure carefully to position your sign
3. Wet the window in the area the vinyl will be placed
4. Remove the white backing from the vinyl graphic
5. Lightly spray the sticky side of the vinyl graphic
6. Lay the wet vinyl graphic (sticky side) on the window. The vinyl should now be against the window sliding on a film of water. You can slide/reposition the vinyl graphic into the exact position.
7. Once in position squeegee the vinyl graphic from the centre out to the edge. (this removes the excess water and makes the vinyl stick)

Cleaning

Clean the vinyl lightly using water. Do not use any solvent based chemicals. Dry with a soft cloth or towel.

The above installation recommendations have been derived from years of practical experience and should be regarded as helpful guidelines only.
